

## A NEW LOOK FOR YOUR PROFILES

Prismatic profiles from BWF Profiles with different structures offer you a perfect light diffusion, hardly any shadows and high transmission while at the same time guaranteeing optimum glare reduction.

### The following prismatic structures are possible

- **BWF diamondPRISM®** structure
- with fine prismatic structure - prism size 2 mm
- K4 structure - prism size 3 mm
- K12 structure - prism size 4,2 mm
- Maximum width for prismatic profiles: 300 mm (stretched length)

### Advantages:

- prisms can be applied all kinds of cross sections even on stripe profiles - we are looking forward to assisting you in the construction of your custom-made special profile with prismatic structure
- custom shades and colours for optimum glare reduction possible
- no "rainbow effect"
- no "water glass effect", i.e. no refraction, the light source is not visible
- homogeneous, diffuse light (interior parts not visible)
- low tension -> no cracks during second operation (milling, cutting, drilling etc.)

The **BWF diamondPRISM®** structure as well as the **fine prismatic structure** can also be purchased as **sheets from stock**.

Please do not hesitate to ask for small samples free of charge.
