

BWF INFINITE®

BWF INFINITE® profiles made from flexible PMMA offer infinite possibilities for the design of curved, endless applications.

Advantages of BWF INFINITE®

- Shore hardness may be adjusted according to specification
- flexibility of the material allows for bending in x and y direction
- no hot forming necessary
- tolerances and properties similar to standard PMMA
- excellent UV stability
- any colouring is possible, e. g. in BWF colourLED®
- profiles can be machined and glued
- flexible material can be co-extruded with standard PMMA

Instructions for Use

Various degrees of Shore hardness may be defined in collaboration with our Product Development team.

Due to the inherent stability of the material, we recommend a maximum width of 100 mm for profiles made from BWF INFINITE®.

Possible bending radii depend on the cross section of the profile. The wider the profile, the bigger the radius.

We will be pleased to assist you in the implementation of your individual design.

Samples

In order to evaluate BWF INFINITE®, we will be pleased to send you a sample kit consisting of various degrees of Shore hardness, free of charge.
